

# ANSHUMAN GOYAL

## Senior Software Engineer

📍 Gurgaon    ✉ goyalanshuman249@gmail.com    ☎ 8853145503    📁 Portfolio    🐙 GitHub    🔗 LinkedIn

## Profile

---

Senior Software Engineer with **5+ years** building high-performance React/TypeScript frontends and Node.js backends. Hands-on with Redis caching & rate limiting, BullMQ workers, Dockerized services, and JWT-secured REST APIs—focused on scalable systems, performance, and shipping measurable product impact.

## Education

---

Indian Institute of Technology Kanpur  
*Bachelor of Technology in Computer Science*

*May 2019*

## Scholastic Achievements

---

- Achieved an **All India Rank (AIR) of 249** (General category) in **JEE-Advanced**, ranking in the top 0.02% among 1.5 million aspirants nationwide.
- **First Prize** winner in **HackerRank Hackathon** for the most technically challenging project in a hackathon of 34 teams conducted in **Techkriti '17 IIT Kanpur**.

## Experience

---

### Software Engineer II - GobbleCube

*July 2025 – Jun 2026*

- Owned end-to-end delivery of a React + **Node.js/Express** product: JWT auth, schema-validated APIs, and multi-step workflows that improved form completion by **15%**.
- Shipped a **Docker Compose** stack (API, worker, Redis, client) with reproducible local/prod-like environments and Redis used as shared cache + message broker.
- Introduced **Redis** for response caching and sliding-window rate limits on auth routes, shielding Postgres from hot-path load and blocking brute-force login attempts.
- Standardized PR quality with **CodeRabbit** as a first-pass reviewer (security, correctness, maintainability), so human reviews focused on design faster merges with fewer production regressions.
- Improved analytics dashboard performance by **30%** on 10k+ row datasets via **list virtualization (React-Window)**, cutting memory churn and main-thread blocking on data-heavy views.
- Designed **tenant-scoped RBAC** across API consumers and UI surfaces, enabling selective data sharing and driving **20% adoption growth** without leaking cross-tenant data.
- Built a **config-driven frontend platform** (service layer, shared hooks, feature modules) that decoupled API orchestration from UI and unlocked parallel feature delivery across product surfaces.

### Software Engineer II - Trential (Previously Crubn)

*June 2022 - March 2025*

- Led a **shared component library** to **75% reuse** across modules—standardizing tables, forms, and auth-gated routes—and **accelerating squad velocity by 40%**.
- Integrated **Node.js/Express + PostgreSQL** verification APIs with idempotent retries and client-side cache strategies, reducing flaky upstream failures and duplicate verification calls in production.
- Offloaded email + cron maintenance to **BullMQ workers** on Redis so request latency stays low; scheduled repeatable jobs (e.g. token cleanup) survive API restarts.

### Software Engineer - Mindlance

*Jan 2020 – March 2022*

- Cut initial bundle load by **~2.5s** via route-level code splitting and production build optimization on a high-traffic React application.
- Hardened third-party API integrations with **exponential-backoff retries**, request deduplication, and cache-aware fetching—improving reliability on degraded networks.
- Built reusable, regulated multi-step workflow modules (auth gates, server-validated forms, state-machine transitions) adopted across multiple client-facing products.

## Technologies

---

*Frontend* : React.js, TypeScript, JavaScript ES6, Redux, HTML5, CSS, Vite

*Backend* : Node.js, Express.js, PostgreSQL, MongoDB, Redis, BullMQ, JWT, REST APIs

*DevOps / Tooling* : Docker, Docker Compose, Git, GitHub Actions, Chrome DevTools
